PAOLI, Pa. (April 15, 2019) – With Ford Motor Company’s official release this morning on the new High-Performance Package (HPP) for the 2020 [Mustang EcoBoost](#) (EB), AmericanMuscle’s (AM) Justin Dugan was honored to be among the first to receive the announcement. Just in time for the Ford Mustang’s 55th anniversary, a new 2.3L HPP available on the EB, borrowed from the outgoing Focus RS, will make the 2020 HPP EB the most powerful four-cylinder sports car offered by an American automaker!

In this episode of AM’s Mustang News, Justin discusses the performance enhancements on the new HPP, like the larger 63-millimeter turbo compressor, bigger radiator, and modified engine calibration, allowing for a 40 percent wider torque curve over the base EB engine. Additional improvements were made to the [suspension](#) and [brakes](#), including an available EB Handling Package equipped with [TORSEN® limited-slip differential](#), [MagneRide® dampers](#), and wider wheels, garnering a near 50/50 weight distribution.

“With Focus RS being discontinued Ford figured, “why not throw the pumped up 2.3L into the Mustang and crank the handling potential to 11?” The result: a new HPP Mustang that rips off 0-60 in mid-4 seconds!” –Justin Dugan
