Installing telematics devices is a growing trend in the auto insurance industry. A telematics device can be used to track the customer's driving habits and monthly mileage. The data gathered by a telematics device can help drivers gain substantial discounts.

Before installing a telematics device, drivers should consider the following:

- Enrolling in UBI programs is free. Many insurance companies are offering usage-based programs and drivers can join them without paying any fee. Some insurers will send the telematics device for free, while others will charge a small fee. Drivers who have good driving habits and are driving fewer miles than average can save quite a lot on their insurance policies.
- Telematics will help drivers become eligible for low-mileage discount. The premiums will increase if the telematics device shows that a driver is driving more miles than what is specified in the insurance application. Drivers who use their vehicles a lot during the weekend can experience a hike in their premiums. To save money on insurance, drivers should join a usage-based program that is short and they should try to drive their vehicles less often while the telematics device is installed.
- Teen drivers will be helped to pay cheaper premiums if they are good drivers. Young drivers pay a lot on their premiums. Young drivers are usually struggling to find better insurance deals. Usage-based programs can help young drivers who have good driving habits to obtain better car insurance deals.
- Bad driving habits will increase the cost of insurance. Once the telematics device is installed, it will begin to track every move the policyholder makes. Telematics devices will track multiple driving habits like speeding, hard braking, or cornering. Drivers who display bad driving habits can have their premiums increased.
