

## **Newell Inx Launched Innovative Car Wash Mitts After 18 Years of R&D**

*113 Year Old Cotton Mill Partners With Local Auto Detailer To Create A Better Car Wash Mitt*

ROXBORO, N.C. ([PRWEB](#)) November 13, 2020 -- A 113 year old Cotton Mill is where Newell Inx. has been working on their revolutionary wash mitts finally ready for public release.

Designed and manufactured in the USA, these light-weight wash mitts will be the last mitts you ever have to get, now available for purchase at <https://newellinx.com/>.

After 18 years in research and development, [Newell Inx](#), a leading US manufacturer of cleaning products, is calling their new products: the “Newell 1 Mitt” and the “Terry Cammon Mitt”.

The [Newell 1](#) looks like an ordinary wash mitt, however, the difference is in the materials. Its high-grade cotton fabric is held together with the same thread used to make parachutes. The durability and consistent performance will be something the car care industry has never seen before. Prototypes of Newell Inx mitts have lasted over 10 years (and over 1,000 washes!)

[The Terry Cammon Mitt](#), a derivative of the Newell 1, boasting two sides of different materials, will be the most productive mitt on the market for professional detailers. The “open hand” design evolved from Newell 1 prototypes being battle-tested by Roxboro, NC. detailer, Terry Cammon, the owner of Terry’s Wash and Detail. While using the mitts, Terry discovered that, over time, his staff would ball their hands up like a fist inside the Newell 1, causing them to miss spots, especially bugs, on customer cars. Cutting the Newell 1 open began to solve the problem. On the other side of the Terry Cammon Mitt, Newell Inx decided to sew a special fabric of really small fibers that make a course material perfect for removing bugs and tar without ever scratching the car. Terry stated in an interview that he would prefer to keep exclusivity of The Terry Cammon Mitt because his cars look better than his competition, however, he is excited, and honored to put his name behind such a strong product.

[Newell Inx](#) spent years testing these mitts for comfort, performance, and durability. Both mitts hold the perfect amount of soap and water, and easily discard dirt and grease when rinsed to provide a deeper and safer scrubbing experience,

With the Newell 1 and Terry Cammon wash mitts, anyone can get his or her car to look professionally cleaned.

Other uses for the mitt include cleaning boats, jet skis, golf carts, UTV's, countertops, tables, and even showers and bathtubs.
