

## Father's Day Gift Ideas For The Car Lover

*Whether dad's a full-blown grease monkey, occasional tinkerer or a wanna be weekend mechanic, we have an automotive gift idea that's sure to please.*

Fountain Valley, CA ([PRWEB](#)) June 14, 2004 -- Equus Products, Inc., offers these suggestions for Father's Day and everyday:

- Innova® 3100 OBD II Code Reader. Find out why the Check Engine light illuminated on 1996 & newer cars, trucks and SUVs with this hand-held OBD2 code reader. Dad doesn't have to be a mechanic or computer guru to use this tool. It's the most user-friendly OBD2 code reader on the market today, with 100,000 satisfied customers. Just plug it into the vehicle's universal connector (usually found under the dashboard), push a button and get all necessary information on one large screen in about 10 seconds. If any trouble codes appear, access the included manual to define the problem. It's great to use before going to the mechanic, taking a road trip, buying a used car or attempting repairs yourself. It can even save you a costly and embarrassing trip to the repair shop for a minor problem such as a loose gas cap. Once repairs are made, it lets you turn off the Check Engine light. The Innova® 3100 OBD II Code Reader is retail priced from \$100.

- iEquus Performance™ 8080 5-Speed Shift Light Tachometer. Unless dad's a die-hard do-it-yourselfer, he can probably do without the usual hassles and costs associated with installing a high performance tachometer. That's why - right out of the box - this super lightweight tach is ready to install on most popular vehicles using your choice of hardwire or world's first inductive pickup options. Suggested retail: \$129 to \$170.

- Innova® 3585 5-Piece Test & Tune-Up Kit. This promotional kit is great for performing basic at-home tune-ups and preventative maintenance. It features the 3551 Inductive Timing Light, which works on most domestic and import vehicles, including those with distributorless ignition systems. It also includes the 3210 Compression Tester, 3220 Vacuum Gauge, 3230 Remote Starter Switch and 4320 Digital Multimeter. Packaged in a briefcase-style carrying case; retail priced under \$100.

- Innova® 3721 Battery & Charging System Monitor. Don't get left on the side of the road this summer. Easily plugs into the cigarette lighter to let dads, grads and mom monitor battery and charging system voltage from the comfort of their vehicle. It features LCD display with bar graph to measure voltage, color-coded LEDs to identify the battery's charge status, and pivoting head for easy viewing. Suggested retail price: \$25.

Fountain Valley, Calif.-based Equus Products, Inc., is an ISO 9001: 2000 certified company, and leading manufacturer and distributor of automotive aftermarket products. These and other Equus®- and Innova®-branded test equipment and gauge products are available at most North American automotive and mass merchandise retail locations.
