

Get Off Clean Highway Paint Remover (HPR) Product is in Full Production

Based on the nationwide trend for increased summer road painting, Get Off Clean announced today that the companies new highway paint remover is in full production. This new technology product is formulated to safely remove both white and yellow paint over spray from clear coat finishes. The company performed all of it's testing in cooperation with the State Highway Traffic Department's road projects.

Ft. Wayne, IN ([PRWEB](#)) August 27, 2004 -- Based on the nationwide trend for increased summer road painting, Get Off Clean announced today that the companies new highway paint remover is in full production. This new technology product is formulated to safely remove both white and yellow paint over spray from clear coat finishes. The company performed all of it's testing in cooperation with the State Highway Traffic Department's road projects.

What most people don't know is that road paint contains glass beads which has a reflective effect during night hours. This specialized water borne paint easily adheres to the paint on automobiles as well as the car's chrome and rubber surfaces. When car owners clean the road paint off their car, they can unwittingly scratch their car surfaces.

Get Off Clean is designed to remove highway paint from all of these surfaces without damage. Mike Liebing, Vice President of Marketing states, "Get Off Clean is not a known entity in the huge automotive after market, but this will soon change as word gets out on the effectiveness of this new product. Get Off Clean HPR is the launching pad for many more professional grade products to follow. Our market is for those interested in superior results. We are serious about our product development."
