

Does Your Laptop Get Carsick?

Braatpaq, Inc has implemented a safer way to use your laptop computer for mobile entertainment.

([PRWEB](#)) October 18, 2004 -- While it is common to see laptop computers being used for mobile entertainment in vehicles, users have no way of properly securing it while in use to prevent any damage to it. In spite of it's name, the lap is not the best place to position a laptop computer while driving. Braatpaq, Inc has a bag specially designed to secure the laptop in a vehicle. The Braatpaq bag looks like a traditional laptop carrying case and can be used as one. In addition however, it has extra straps that allow it to be mounted over vehicles front seat headrests. When mounted in the vehicle, the laptop can be positioned in it with only the screen extending outside of the bag, allowing movies to be watched and games to be played. Inner straps secure the laptop while it is in use. The bag is designed to fit in most vehicles , from compacts to minivans to SUVs. This prevents laptops from being passed from lap to lap.

This idea, which was conceived by the President of Braatpaq, Inc and mother of two boys, has been embraced by families that take long road trips. "I feel very excited that I am able to offer families extra peace of mind during road trips," she reports. "After strapping my kids in their seats, I give my laptop it's own very special seatbelt."

The Braatpaq bags are currently being offered at www.braatpaq.com. Questions can be sent to sales@braatpaq.com.
