

Trailer Hitches Get Uplifted by My Air Hitch's New Product

My Air Hitch LLC is adding a hydraulic lift to their line of quality air-ride trailer hitches, the strongest and safest trailer hitches available.

([PRWEB](#)) October 1, 2004 -- My Air Hitch, one of the original manufacturers of air-ride hitches, has added a new hydraulic lift to their line of high quality [trailer hitches](#).

The hydraulic lift smoothly and efficiently raises and lowers the [trailer hitch](#), making manual cranking unnecessary. It is equipped with an adjustable mounting bracket and hardware, making it fit almost any gooseneck [trailer hitch](#).

"The hydraulic lift is really an amazing [trailer hitch](#) tool," said Shelli Taylor of My Air Hitch. "It is incredibly easy to use and takes a lot of time and effort out of hooking up a [trailer hitch](#). It's perfect for older people on RV trips or women loading up horse trailers alone. It won't sink into soft ground and it's almost effortless to use."

In addition to adding the hydraulic lift to their line of products, My Air Hitch is also improving the quality of their air-ride hitches.

The air-ride [trailer hitch](#) is better than the traditional [trailer hitch](#) because it breaks the rigid connection that exists with a traditional hitch. My Air Hitch replaced the roller bearings inside the [trailer hitch](#), which often wear out the metal, become loose, or distort the track, with nylon tubing designed by engineers in the aerospace industry. This makes the air-ride [trailer hitch](#) act like a shock absorber, taking in all the jerking and pulling that is normally experienced by the truck and trailer. The nylon tubing is maintenance-free, while roller bearing hitches must be serviced every 10,000 miles.

"Our fabricators use the computer-controlled plasma arc cutter, shears, and brakes to form our metal. This is a stronger, safer method of manufacturing and eliminates a lot of cutting and welding," said Shelli Taylor. "The plasma cutter puts less heat into the part, which means less warpage than traditional flame cutters. The plasma arc cutter also cuts five times faster than flame cutters, which allows us to cut delivery time and cost, and produces a much cleaner piece of metal. The quality is much better than a traditional flame cut piece."

My Air Hitch is offering a month-long special on their air-ride trailer hitches, with discounts of hundreds of dollars on every item. Free information about the air-ride [trailer hitch](#) and the hydraulic lift, as well as a brochure and price guide for easy online ordering, is available at [MyAirHitch.com](#) or by calling toll-free at 1-877-MY-HITCH (1-877-694-4824).

About My Air Hitch LLC

My Air Hitch began manufacturing the air-ride [trailer hitch](#) in 1999. For the last five years, the family owned and operated company has been dedicated to providing safe, reliable [trailer hitches](#) for any size truck, trailer, or RV.
