

STS Releases Security Solution for Commercial Fleet Operations

Security is the number one problem facing the transportation industry today. Secure Tracking Systems provides an affordable GPS tracking solution for vehicle fleets which increases security in buses, trucks, cars, and trailers.

Weston, FL ([PRWEB](#)) October 30, 2004 -- Security is the number one problem facing the transportation industry today. Above all else, Security must have the highest priority for all corporate concerns. It's what keeps us awake at night.

Secure Tracking Systems, <http://www.sts-locator.com>, provides solutions based on the most sophisticated vehicle tracking devices available; giving fleet owners access to location, alarm notification, and historical data, all in real time. Access to the information is easy and convenient; simply log into the STS web site. For those businesses wanting a self contained system, STS offers a server based solution allowing them to manage their fleets internally.

Secure Tracking Systems helps commercial fleet managers to anticipate problems before they arise. Fleet tracking is not about doubting your employees; it's about increasing driver safety, running a business more efficiently, and offering your customers the best service possible. The result is optimized operations and more efficient scheduling. The STS system enhances security for both cargo and driver, improves just-in-time delivery capabilities, and generally addresses the operational issues that play an important role in the day-to-day running of a profitable business.

GPS tracking has been available to the trucking industry for some time now, historically using large hardware devices and older communications technologies. The price tag on these older systems put these solutions out of reach for many fleet operations. STS is changing all of this; by using modern technologies, coupled with advances in wireless communications, STS provides affordable solutions to any fleet operation, no matter how large or how small. Low priced solutions also mean a quicker return on investment, often in as little as 3 months!

About Secure Tracking Systems

Secure Tracking Systems, LLC is a solutions provider focusing on the transportation and shipping container industries. STS provides value-added products and services which enable fleet managers to improve cargo security, increase driver safety, enhance customer service, and control operating costs. STS is headquartered in Weston, Florida and markets fleet solutions to businesses in the U.S.A. and in Latin America.
