

Havis Featured in Transportation and Logistics International Magazine “Driving Solutions” Article

Havis' high-quality docking and mounting solutions protect and organize expensive in-vehicle equipment and hardware to maximize mobile worker productivity.

WARMINSTER, Pa. ([PRWEB](#)) November 18, 2015 -- [Havis Inc.](#), an ISO 9001:2008-certified company, was featured in the Fall V2 issue of Transportation and Logistics International (TLI) in the article, “[Driving Solutions](#),” which identified Havis products’ differentiating features of comfort, safety and quality.

Havis is an industry leader in providing total mobility solutions, including mounting equipment and docking stations, for fleets in utility and electric, energy services, material handling, transportation, and railroad and railway industries. Havis also offers a range of prisoner and K9 transport solutions for public safety and government sectors. All Havis products are designed and manufactured to optimize comfort while ensuring safety and quality.

“Our products are built with customers’ expectations in mind,” said Chris Bernert, director of sales, as quoted in the article. “We are very in touch with our customers in terms of sales, technical support and the level of engineering that goes into the products.”

COMPATIBILITY AND SAFETY

TLI’s Janice Hoppe wrote the article, which cited the rigorous safety standards that Havis holds to its products as one of the ways that it differentiates itself in the industry. Havis engineers products around safety obstacles, from airbag deployment zones to vehicle controls, to ensure that a mobile solution will not interfere with a vehicle’s functions. Havis products are also designed to consider ergonomics and function, once a solution is installed.

In order to accommodate mobility solutions for different vehicle makes and models, Havis partners with automotive and heavy-duty original equipment manufacturers (OEMs) to design, test fit and evaluate new products.

“Depending on the size and weight of a product we are mounting, we need to make certain that all of the mounting points in the vehicle’s structure are adequate to support the additional stress of weight and vibration over the life of a vehicle,” said Bernert as quoted in the article.

Hoppe wrote that in a similar way, Havis fosters long-term relationships with laptop and tablet manufacturers to ensure product compatibility with a variety of models, from monitors to tablets. As a response to the shifting trend to lightweight devices, Havis’ National Sales Manager Sam Barall said that Havis has designed more universal cradles to hold most tablet sizes on the market.

No matter what device, brand or vehicle a customer chooses, Havis provides full customer support from start to finish.

“We consider ourselves a key component to a total mobility solution,” said Heather Miller, marketing manager at Havis, as quoted in the article. “The end user has a problem and typically they need software to solve that

problem. They need hardware to run that software and where we fit in is we can assist the customer in considering their options on how to dock, mount and accessorize their total mobility solution early on in their project.”

NEW SOLUTIONS

Hoppe also wrote about a new Havis product that improves safety and productivity. Havis recently launched Screen Blanking Solution powered by Blank-It as an easy, safe and legally compliant way to prevent driver distraction by blocking or limiting access to computer displays while a vehicle is in motion.

Havis plans to continue to stay relevant and innovative by providing mounting and docking solutions to solve business problems in the industries it supports.
