

Johnston Madvac Introduces Advanced 2-micron Dust Filtration to the Madvac 61 Vacuum Litter Collector

The Madvac 61 advanced 2-micron dust filtration system virtually eliminates dust during vacuum litter collection.

([PRWEB](#)) November 27, 2004 -- Operators can now pick-up litter outdoors as well as indoors. A two (2) stage dust filtration system prevents litter from passing through the fan unlike other systems that allow litter to travel through the vacuum fan. This tends to clog and damage the vacuum fan and fan drive resulting in costly downtime and repairs.

The Madvac 61 vacuum compacts heavy-duty litter such as: cans, bottles, newspaper, plastic, cigarette filters, plastic bags from landfills, train tracks, construction sites, streets, parks, highways and parking garages. It collects approximately 100 to 120 gallons of litter with a hose length of up to 40 ft.

The new Madvac 61 provides effective litter collection capabilities in previously unworkable grounds and/or labor-intensive projects.

Features of the 61 vacuum litter collector

- Â· Advanced 2 micron dust filtration
- Â· Patented advanced straight through suction with No Fan to Jam TM technology
- Â· Variable suction control
- Â· Easy access disposable bag
- Â· Available in Diesel, Gasoline, Propane and Electric

Madvac background: Johnston Madvac Inc has a worldwide customer network of 200 stocking distributors in over 70 countries. Madvac designs and manufactures vacuum litter collection vehicles since 1986, and has unquestionably become the leader in its field on the world market. It delivers total quality vehicles for airports, highways, amusement parks, cities & municipalities, federal & state properties, industrial & commercial complexes, landfill sites, parks, campgrounds, schools & universities, shopping centers & parking lots, streets and underground garage applications.
