

High Performance Hubcaps Turning Around on Parts Train

Parts Train's Hubcaps are either made of plastic or metal. Spinning hubcaps look just as good and are much more economical than spinning rims. Parts Train's Spinning hubcaps are made of a high quality, tough and lightweight, triple-chrome plated ABS plastic with metal retaining clips for a better fit and superior retention.

([PRWEB](#)) July 14, 2005 -- Hubcaps are used to cover the lug nuts holding the 'hub' of the wheel on the axle. Those hubcaps are usually bolted on and smaller than 6" in diameter. Later designs that covered the completely metal wheel are called "wheel covers." The terms are now interchangeable. In today's usage, hubcap can be used as a more generic term covering everything from center caps (covering only the lug nuts) to wheel covers that hide the whole wheel rim.

Parts Train's Hubcaps are either made of plastic or metal. Most customers prefer plastic as it performs better as a wheel cover due to its lighter weight. Metal hubcaps are heavier and tend to come off due to centrifugal force. And they cost a lot more.

Mazda custom chrome hubcaps give styled steel or alloy wheels a high-end chrome look and are an inexpensive alternative to chromed alloy wheels that may cost up to 20 times as much.

There are Mazda hubcaps that are ABS plastic and triple chrome plated. A major quality of this material is that when it is scratched, it does not degrade further with time and exposure to sun, weather, and salt. Even after some years, the scratch will look the same as it did the first day. Whereas chromed metal, steel or alloy, will react with oxygen and salt, and will rust, pit, scale, or flake after it has been scratched.

Hubcaps come off due to broken clips, faulty installation, or damage from contact with a curb. Sometimes the impact from a big pothole or speed bump can knock off a hubcap. Spinning Hubcaps are also available at Partstrain. It is made of a high quality, tough and lightweight, triple-chrome plated ABS plastic with metal retaining clips for a better-fit and superior retention. The rotating outer plate attaches to the inner portion by an encased bearing. Spinning hubcaps look just as good and are much more economical than spinning rims.

These hot auto fashion items are commonly called Spinning Hubcaps, spinning wheel covers, spinner hubcaps; spinner wheel covers, spinning rims, spinning wheels, or just "spinners." Spinner hubcaps continue rotating when the wheel has stopped, and they rotate slower than the tire while at road speeds, for tremendous eye-catching effect. Parts Train's Spinning hubcaps are made of a high quality, tough and lightweight, triple-chrome plated ABS plastic with metal retaining clips for a better fit and superior retention. The rotating outer plate attaches to the inner portion by an encased bearing. Spinning hubcaps look just as good and are much more economical than spinning rims.

Buy quality Mazda parts and accessories at Partstrain on discount prices. In stock are new, OEM, remanufactured, and quality aftermarket Mazda auto parts at guaranteed lowest prices. Simply browse at <http://www.partstrain.com/ShopByVehicle/MAZDA> and you have an access to one of the largest Mazda auto parts wholesalers in the United States offering a variety of aftermarket and replacement Mazda car parts including radiators, fog lights, tail lights, air filter, tune up parts, Mazda clutch, belts, hoses, Mazda repair manual, headlights, water pump, fuel pump, Mazda brake pads, Mazda exhaust parts, Mazda catalytic converters, mufflers, Mazda parts, Mazda engine parts and many other Mazda replacement parts.
