

Bosch Video Management System Joins Ranks of PlateSmart ALPR Integrations

Bosch customers to have access to award-winning ALPR and vehicle recognition solution

OLDSMAR, Fla. ([PRWEB](#)) April 03, 2020 -- PlateSmart Technologies has added yet another major VMS brand to its portfolio of integrations. The company today announced its flagship enterprise automatic license plate recognition (ALPR) and vehicle recognition solution — PlateSmart ARES® — is now integrated with the Bosch Video Management System (BVMS).

“PlateSmart’s ALPR software is the perfect complement to BVMS,” said John Chigos, CEO, PlateSmart Technologies. “BVMS is flexible, scalable and ideal for any number of applications and industries. And now, those who take advantage of BVMS can also avail themselves of PlateSmart’s award-winning ALPR and vehicle recognition.”

Like PlateSmart ARES, BVMS is designed to integrate easily with an existing security infrastructure — a business philosophy that mirrors that of PlateSmart. BVMS can also monitor up to 200,000 cameras (depending upon the edition), while PlateSmart also boasts the ability to read plates from a virtually unlimited number of cameras. Both aspects make the partnership ideal.

PlateSmart was the first ALPR company to use early forms of artificial intelligence (AI) as part of its software solution. Today, AI coupled with deep learning has allowed PlateSmart software to evolve beyond only ALPR into a true vehicle recognition solution.

“PlateSmart ALPR solutions can provide a wealth of actionable data to users,” Chigos said. “This goes beyond the plate and its jurisdiction to include vehicle color and make. Soon we will be offering vehicle type and orientation. PlateSmart has been and will continue to be at the forefront of vehicle recognition technology.” For more information about PlateSmart solutions, visit <http://www.platesmart.com>.

About PlateSmart®

PlateSmart Technologies developed the world’s first software-only vehicle identification and video analytic solutions, which are compatible with both state-of-the-art and legacy cameras. PlateSmart offers both mobile and fixed-location solutions, which are designed either to function as stand-alone tools or to integrate with third-party software and hardware. ARES, PlateSmart’s enterprise solution, provides real-time actionable intelligence with license plate number, state jurisdiction, and vehicle make recognition for complete situational awareness. PlateSmart’s solutions are the recipients of multiple industry awards for excellence in security technology. <http://www.platesmart.com>
