

## **Announcing the Shadow Ebike 2.0 Featuring Bluetooth Technology on Android Phone Systems; the Shadow Ebike is to be Showcased at CES in Las Vegas from Jan.10-13**

*Announcing the Shadow Ebike 2.0 featuring Bluetooth technology on Android phone systems. The Shadow Ebike is to be showcased at CES in Las Vegas from Jan.10-13. It is the first wireless ebike featuring wireless brakes, wireless throttle and a wireless pedal assist system. Added to that is also an integrated battery and motor design powered by the proprietary Daymak Drive™ technology, thus making the Shadow Ebike the most sophisticated electric bicycle on the market today.*

Toronto, Canada ([PRWEB](#)) January 10, 2012 -- Aldo Baiocchi, Daymak Inc's V.P. of R&D, is pleased to announce the second version of Daymak's Shadow Ebike, The Shadow Ebike 2.0 Bluetooth. The world's first wireless ebike, the Shadow, is powered by the proprietary Daymak Drive, developed in Canada by Daymak Inc.

“The Shadow Ebike 2.0 converts your Android phone into a complete control system for the Shadow Ebike. Your phone is the key to turning the ebike on and off. The app features a slew of options including: user defined pedal assist modes, top speeds, GPS, odometer, speedometer, trip data, altitude, battery life, and history of all usage” states Mr. Baiocchi. Being the first and only wireless Ebike in the world makes the Shadow Ebike a unique product on the market today, and now with the android operating system it is, an unheard of use of technology. “The Shadow Ebike 2.0 bluetooth is the first wireless ebike with Bluetooth functions. It makes perfect sense for this ebike to have no wires and wireless controls via bluetooth” continues Mr. Baiocchi. He goes on to say “The Shadow Ebike 2.0 will go into production Spring 2012 and will be showcased at the Las Vegas CES show this week.”

“The CES show is a great place to showcase our technology. This is the only ebike in the world where the key to turning it on is your phone!” states Baiocchi. The Shadow Ebike is a leading edge power assisted bicycle with intergrated wireless design, which means that no wires are hanging loose or are in the open avoiding most common failures found in common electric bicycles.
