

## **Xuron® TK3200 Pro-Modelers Scale Model Tool Kit Eliminates Razor Blades & Knives**

*A precision tool kit especially designed for model builders that includes three essential tools for cutting, bending, and holding small plastic and metal parts has been introduced by Xuron Corp.*

Saco, ME ([PRWEB](#)) January 13, 2021 -- Xuron Corp. has introduced a precision tool kit especially designed for model builders that includes three essential tools for cutting, bending, and holding small plastic and metal parts.

The [Xuron® TK3200 Pro-Modelers Tool Kit](#) contains three essential tools for model builders: a Model 2175ET Sprue Cutter, Model 9180ET Scissors for photo-etch cutting, and Model 450 TweezerNose™ pliers for forming, holding, and inserting parts. Eliminating the need for razor blades and knives, the tools come in a canvas pouch with handy pockets for protecting each tool.

Ideally suited for advanced scale model builders who need to precisely cut and manipulate small plastic parts and thin photo-etched metal pieces without deformation, the Xuron® TK3200 Pro-Modelers Tool Kit will last for years. The tools are made of high carbon steel with a non-glare finish, Light-Touch™ return springs, and Xuro-Rubber™ soft cushioned rubber grips.

The Xuron® TK3200 Pro-Modelers Tool Kit is priced at \$73.75 (suggested retail) and is manufactured in the U.S.A.
