

Coencorp's Fleet Fuel & Maintenance Management Solution Is Selected by Municipality North of Montreal

The City of St. Sauveur, located north of Montreal Canada, has selected Coencorp, a leading fleet management solutions provider, to supply fleet fuel & maintenance software, hardware and support services for their public works department.

MONTREAL ([PRWEB](#)) January 08, 2021 -- All municipalities are facing increased pressure to reduce their operating costs. For most public works departments, the two main cost areas include fleet fuel and maintenance. Coencorp is pleased to announce being selected to supply its fleet fuel SM2-FUEL, and maintenance management SM2-MAINTAIN, hardware, software and support services to the City of Saint Sauveur located in the Laurentians, north of Montreal Canada.

The municipality of Saint Sauveur manages over 80 vehicles to service approximately 10,000 residents living in a 50 square kilometer area. The contract requires Coencorp to provide fuel management hardware and cloud-based software to automate the municipality's two inventory and dispensing fuel stations. Additionally, Coencorp will also provide the necessary customer support to assist Saint Sauveur with the implementation and management of their fleet's preventative and predictive maintenance programs and parts inventory.

Ali Tavassoli, President and CEO of Coencorp comments, "Labor, maintenance and fuel are typically the largest expenses for any fleet vehicle operation. Saint Sauveur were looking for a reliable fuel management solution and wanted an integrated solution for the maintenance program of their fleet. We have been providing municipalities across North America with fleet management solutions for over 30 years and we are pleased that Saint Saveur chose Coencorp as their fleet management partner."

Much of the hardware has already been shipped to the city and work has begun to implement the fuel management hardware at Saint Sauveur's two main fueling facilities.

Mr. Tavassoli adds, "The daily and monthly fuel monitoring and accurate accounting reconciliation can be difficult. The SM2-FUEL system automatically and accurately accounts the transactions and inventory management of the fleet's fuel and other consumables saving time and keeping the fleet management compliant with local provincial and federal legislation."

Full implementation of the fuel and maintenance hardware and software is expected to be completed by February 2020.

About Coencorp: Founded in 1991, Coencorp is a leading manufacturer of automated fleet and fuel management solutions. They design, develop, manufacture, market, and support sophisticated hardware/software systems that deliver efficient management of fleets of 100 or more vehicles. Their mission is to contribute to their valued clients' bottom line by reducing their highest operating expenses, namely labor cost, fuel consumption, and asset tracking & maintenance, through the intelligent use of Coencorp advanced automated hardware and software technologies.

Today, Coencorp systems are used globally in over 1000 sites, managing over 500,000 vehicles in various public or private organizations, including but not limited to municipalities, public transits, national defense, oil & gas operators and companies, mining, construction, transportation, utilities, telecom, private fleets, and

automobile dealerships.
