School Buses

People Saving People

<http://www.nhtsa.dot.gov>

A school bus-related crash is a crash which involves, either directly or indirectly, a school bus-type vehicle, or a vehicle functioning as a school bus, transporting children to or from school or school-related activities.

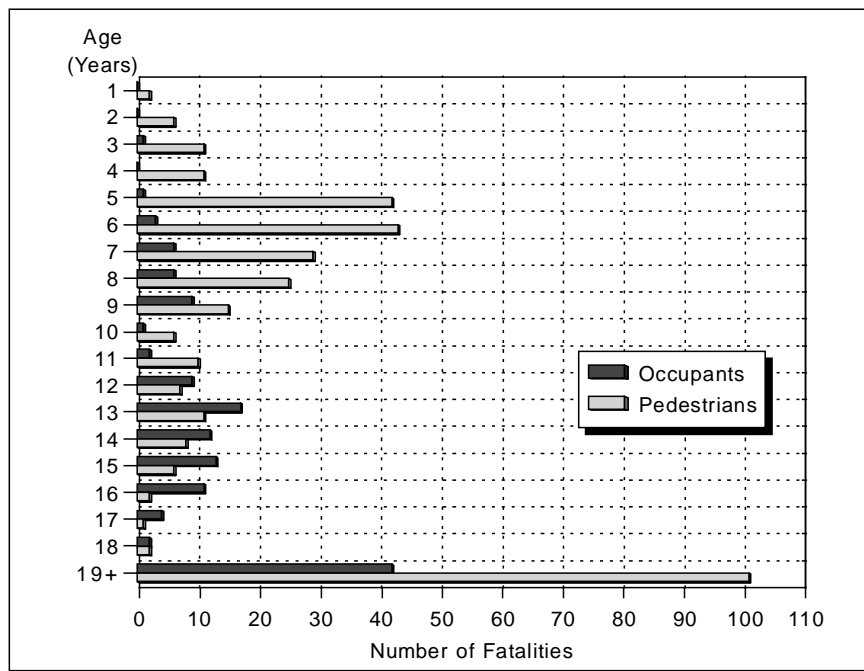

Since 1988 there have been about 416,000 fatal traffic crashes. Of those, 0.30 percent (1,265) were classified as school bus-related.

Since 1988, 1,409 people have died in school bus-related crashes — an average of 128 fatalities per year. Most of the people who lost their lives in those crashes (64 percent) were occupants of other vehicles involved. Nonoccupants (pedestrians, bicyclists, etc.) accounted for 27 percent of the deaths, and school bus occupants accounted for 10 percent (drivers 2 percent, passengers 8 percent).

Since 1988, 237 school-age pedestrians (less than 19 years old) have died in school bus-related crashes. Nearly two-thirds (64 percent) were killed by school buses, 4 percent by vehicles functioning as school buses, and 32 percent by other vehicles involved in the crashes. Nearly half of all school-age pedestrians killed in school bus-related crashes were between the ages of 5 and 7.

“An average of 30 school-age children die in school bus-related traffic crashes each year — 9 school bus occupants and 22 pedestrians.”

Figure 1. Occupant and Pedestrian Fatalities in School Bus-Related Crashes, by Age, 1988-1998

Note: Occupant fatalities shown are for occupants of school buses or vehicles used as school buses.

On average, 15 school-age pedestrians are killed by school buses (or vehicles used as school buses) each year, and 7 are killed by other vehicles involved in school bus-related crashes.

More school-age pedestrians are killed in the afternoon than in the morning, with 41 percent of the fatalities occurring in crashes between 3:00 and 4:00 PM.

“From 1988 to 1998, half of all school-age pedestrians killed in school bus-related crashes were 5 to 7 years old.”

Between 1988 and 1998, 93 crashes occurred in which at least one occupant of a school bus or a vehicle functioning as a school bus died. Half of those crashes (51 percent) involved another vehicle. In the 46 single-vehicle crashes, 59 occupants — 10 drivers and 49 passengers — were killed. In the 47 multiple-vehicle crashes, 16 drivers and 64 passengers died. In the 46 single-vehicle crashes, the first harmful events were as follows: striking a fixed object (26 crashes), a person falling from the vehicle (10 crashes), the vehicle overturning (5 crashes), the vehicle colliding with a train (3 crashes), and collision with object not fixed (1 crash).

In 39 percent of all crashes involving fatalities to occupants of a school bus or vehicle used as a school bus, the principal point of impact was the front of the vehicle.

Since 1988, 6 drivers and 45 passengers have died in school buses providing transportation for purposes other than school or school-related activities (churches, civic organizations, etc.). In 1987, one such multi-vehicle crash resulted in the deaths of 27 occupants, including the driver.
