Indianapolis, IN ([PRWEB](#)) January 01, 2014 -- General Motors revamped the Camaro engine in 1998 in the U.S., and motors for these vehicle remain in demand in used condition. Engine replacements for Camaro vehicles are now for sale at the Got Engines company online. This company has increased its performance inventory this year and is now selling used 98 Camaro engine inventory at <http://www.gotengines.com/chevrolet/rebuilt-chevy-engines.html>.

These Camaro engines are offered in LS1 builds, apart from the newer editions now built by GM. The 5.7 displacement offered with LS1 series helped to bring new attention to the Corvette after years of disappointing sales in the North American market.

The Got Engines company increased its performance engines inventory in 2013 and is expected to continue this practice during the course of this year. The 5.7 series V8 engines are one portion of the new General Motors inventory now added online for sale in the U.S. market.

"The LS1 engine remains in demand on the second hand market due to the high cost of purchase for a new condition unit straight from a Corvette dealership," said a source at the GotEngines.com company.

The used LS1 Chevy Corvette engine inventory now included for the 2014 year online is eligible to receive the warranty coverage announced last year for most engines sold through the GotEngines.com website. These warranties are allowing a 24 month coverage extension for each engine purchased.

"Performance engines that are purchased in used condition online through our inventory are enhanced with the new levels of warranty coverage buyers receive after purchase and fulfillment," the source included.

The GotEngines.com existing Corvette inventory of motors online can be researched through the updated engines locator added last year. All new inventory for this year is already featured in the search system including the LS1 and other LS motors used in GM vehicles.

Engine researchers can submit a price quotation request through the use of this locator tool online this year. This price retrieval method is a new concept moving forward to expedite engine lookups for U.S. purchasers.

### About GotEngines.com

The GotEngines.com company provides used condition automobile engines that are low in mileage count and discounted for sale online. This company has remained one of the largest resources for locating replacement vehicle engines since 2007. The GotEngines.com website supplies information to engine buyers who are researching purchases before making decisions to order used engines. This company employs a full-time staff of engine support experts providing immediate services to buyers. The free shipping and attachment of limited warranty protection with each engine for sale increased sales in 2013.
