

New at Summit Racing: QA1 Suspension Handling Kits

QA1's engineers have just unveiled suspension systems purpose-built for specific Ford, GM, and Mopar vehicles. They feature perfectly matched components, designed to work together with the stock parts to achieve drivers' performance handling goals.

Tallmadge, OH ([PRWEB](#)) February 02, 2016 -- [QA1 Suspension Handling and Drag Kits](#) are available in three tiers. Exact contents of each kit vary by application, but here's a basic rundown:

Level 1 Kits are designed for drivers who want to upgrade the car's handling, but don't want to significantly alter the ride height or quality. The kits come with a set of sway bars, end links, polyurethane bushings, control arms, and tie rod sleeves. Level 1 kits don't include shocks, so drivers can select an option that's best suited to their desired handling and ride characteristics.

Level 2 Kits take the Level 1 kits a step further, adding parts like upgraded upper/lower control arms and springs. They're intended for spirited driving and the occasional autocross. QA1's Level 2 kits also include adjustable shocks, which means drivers can tune the suspension for both ride height and handling performance.

QA1 intends Level 3 Kits for vehicles that spend most of the time at the track. The kits come with special, low friction control arms for bind-free operation front and rear. The shocks are now double-adjustable for more precise tuning and the whole kit is comprised of race-ready components.

The Drag Race Handling Kits are available in two tiers: Level 1 and Level 2. Just like the Handling Kits, going up a level adds more components tuned for more aggressive driving. Shocks are available separately on both kits, for vehicles that have significantly altered weight from stock.

Each suspension piece is also available separately, allowing drivers to upgrade their suspension systems incrementally, as time or budget allows. Parts are interchangeable between performance levels, so for example adding parts from the level three kit to a level one kit is no problem. QA1 designs and manufactures each part in the U.S.A.

Current applications include:

GM

1964-78 A-Body

1978-88 G-Body

1967-2002 Camaro/Firebird

Ford

1979-2014 Mustang

Mopar

1967-72 A-Body

1966-74 B-/E-Body
