

## **New at Summit Racing Equipment: Nitrous Outlet Nitrous Oxide Systems and Accessories**

*Summit Racing now carries Nitrous Outlet nitrous oxide systems and accessories. Nitrous Outlet builds vehicle-specific systems that deliver big power and install easily with little to no modification needed--not always the case with other nitrous systems.*

Tallmadge, OH ([PRWEB](#)) June 15, 2016 -- Summit Racing now carries [Nitrous Outlet](#) nitrous oxide systems and accessories. Nitrous Outlet builds vehicle-specific systems that deliver big power and install easily with little to no modification needed--not always the case with other nitrous systems.

Summit Racing carries over 1,400 Nitrous Outlet systems plus accessories like bottle brackets and control panels:

### EFI Plate-Style Nitrous Systems

Designed for late model EFI engines, these systems add 200 extra horsepower out of the box—and up to 400 horsepower with additional jetting. The wet-style systems feature an injection plate or throttle body spacer with six nitrous and fuel discharge ports that completely saturate the air intake charge with the properly atomized nitrous/fuel mixture.

Each system comes with vehicle-specific pre-bent line, brackets, fuel rail adapters, and other hardware for a clean, no-hassle installation. Other features include:

- Wide open throttle switch that only allows the system to be activated at full throttle to help prevent engine damage and lean spikes
- Nitrous and fuel solenoids rated to 400 horsepower
- Jetting for 50-100-150-200 horsepower levels
- E85 compatible with proper jetting
- Anodized black aluminum plate and 10 pound bottle (most systems)
- Hardware and electrical components included

Summit Racing carries Nitrous Outlet EFI plate systems for many late model GM, Ford, and Chrysler vehicles including 1998-2002 Camaro/Firebird, 2005-06 Pontiac GTO, 2007-12 GM truck, and 2011-15 Mustang 5.0L. There are also versions for engines with aftermarket intake manifolds from FAST, MSD, and Holley.

### Heated Bottle Brackets

A heated nitrous bottle bracket can keep nitrous bottle pressure at optimum levels for consistent performance pass after pass. Machined from 6061 billet aluminum, the brackets have quick-release clamps and rubber insulators, and are available in single- or dual-bottle versions. Choose a bracket that holds a bottle(s) vertically or horizontally.

### Electrical Switch Panels

Just like its nitrous systems, Nitrous Outlet makes switch panels that are designed for each vehicle. The water jet-cut aluminum panels have large rocker-style switches for system arming and the bottle heater, plus large buttons for functions like a bottle opener or purge system depending on the panel selected. The panels work with any brand nitrous system and install without drilling. Current applications include:

- 1993-2002 Camaro/Firebird

- 2010-15 Camaro
- 1997-2013 Corvette
- 1987-2009 Mustang
- 2005-2011 Dodge Magnum, Charger, Challenger

#### Remote Nitrous Bottle Opener

This neat little device lets a racer open the nitrous bottle from the drivers seat with the flick of a switch. The opener has thumb-twist screws for easy installation and removal from the bottle, and comes with all necessary wiring and hardware. It fits Nitrous Outlet 10 and 15 pound bottles.
