

Mini Mania, the leading supplier of aftermarket and performance products for the BMW MINI Cooper has started to ship their new Limited Slip Differential.

Mini Mania, after 28 years of supporting the classic Mini Cooper has now for the last 2 years been developing and providing performance and aftermarket parts for the new MINI Cooper. The new Limited Slip differential enhances an already great car in the hands of enthusiastic drivers.

([PRWEB](#)) February 9, 2003 -- The Mini Mania limited slip serves two distinctive functions in your street or race vehicle. First, it functions as a disc-type limited slip in cornering and braking. Disc plates exert pressure against spider gears using spring pressure to regulate the amount of slippage at the wheels. Helping to accelerate earlier, while exiting corners at a higher speed.

Secondly, it works as a locker in hard acceleration. The disc plates pivot, locking spiders, causing both wheels to exert equal power to the road, providing less torque steer than an ordinary differential.

Mini Mania has served the classic Mini and new MINI driving enthusiast for the last 28 years with product development and availability unsurpassed in the industry. Headquartered in a 28k sq.ft. complex in Nevada City, California. They can be found on the web at www.Minimania.com or can be reached at 800 946-2642
