

Summit Vehicle Inspection Stations Complete

The completion of Summit's most recent vehicle inspection stations at another US Naval Air Station are providing much-needed shelter for the officers charged with daily security duties. Summit continues to take pride in each project that contributes to an increased level of homeland security.

([PRWEB](#)) April 1, 2004 -- As one of several buildings supplied to the base, the front gate structure (pictured right) provides shelter for the entire main gate area. Regardless of the weather, officers tasked with standing watch are able to carry out an efficient inspection of every vehicle entering the base. Neither precipitation nor the sun's reflection obscure views within the vehicles, and inspection equipment is protected from exposure to the elements - thereby extending its life and ensuring performance.

The structure itself utilizes the proven Low Profile ViperSteel galvanized frame - built in accordance with strict military specifications to meet or exceed all regional building codes. The fabric, provided in blue to match the Navy color scheme, is the Duraweave FR membrane. The entire structure is backed by the Summit warranty - one of the most comprehensive and dependable warranties available in the industry.

The Navy's response has been very positive. "I'm extremely pleased of the outcome of the front gate structure," commented the Security Operations Officer for the base. "The officers out there really appreciate the coverage from the elements. I've been getting a lot of positive feedback from the security staff."

This contract, for a total of five structures, serves to further solidify Summit's presence at US naval bases, with structures meeting a wide variety of building needs. Summit truly is the Ultimate Building Solution for military and commercial aviation facilities.
