

## **InventHelp Client Designs Protective Suit for Motorcyclists (SFO-294)**

*Pittsburgh-based InventHelp is submitting the MOTORCYCLE SAFETY WEAR to companies for their consideration.*

Pittsburgh, PA ([PRWEB](#)) December 14, 2016 -- While motorcycle manufacturers prioritize safety features, riders are still vulnerable in the event of an accident. An inventor from San Pablo, Calif., realized that helmets were not enough and decided to design a type of full-body protection.

He developed MOTORCYCLE SAFETY WEAR to protect motorcycle riders from injury and death. Since it absorbs most of the impact from accidents, it provides improved safety for motorcyclists. It, therefore, affords peace of mind for concerned riders and their families. Its sturdy design makes it ideal for both on-road and off-road motorcyclists and operators of ATVs and other equipment. It is also comfortable and easy to use. In addition, it is convenient, effective and affordably priced.

The inventor's personal observation inspired the idea. "After witnessing a motorcycle accident in which the rider broke his leg, I thought it would be a good idea to create a suit with metal inserts for maximum protection," he said.

The original design was submitted to the San Francisco 2 office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-SFO-294, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
