

## **Motorcyclist's Boot Protector Invented by InventHelp Client (NJD-1346)**

*A leading invention company, InventHelp is submitting the CAM STRAP to applicable companies for their consideration.*

PITTSBURGH, PA ([PRWEB](#)) April 10, 2017 -- The outfit of a motorcyclist is chosen more for its functionality rather than fashion statement. The thick leather jackets, leather pants and sunglasses protect the rider's body in case of a crash and the rider's eyes from debris on the road.

That is the same premise for the patent-pending CAM STRAP, a new invention that protects the gear-shifting left boot from wear and tear. "I felt compelled to create this type of accessory after my own personal experience with ruining a brand new pair of boots while riding my motorcycle," said the inventor, a motorcyclist from Lakewood, N.J. CAM STRAP's attractive design provides added cushioning for the motorcyclist, improving their comfort level and prolonging the life of their shoes.

This invention also ensures the transmission is shifted precisely to prevent damaging wear and tear on the machine itself. It is practical, easy to use, and producible in different colors, shapes and sizes to appeal to all motorcyclists.

The original design was submitted to the New Jersey office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 15-NJD-1346, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
