

Inventor Develops Air Deflector (IPL-424)

InventHelp, founded in 1984 in Pittsburgh, is attempting to submit this idea, the T&H Air Deflector, to applicable companies for their consideration.

PITTSBURGH ([PRWEB](#)) November 01, 2017 -- “I love to boat, motorcycle and ride wave runners, ATVs and vehicles, but I thought there needed to be a better way to deflect strong winds,” said an inventor, from Muncie, Ind., “So I invented the T&H EXTENDER AIR DEFLECTOR.”

The patent-pending T&H EXTENDER AIR DEFLECTOR provides an effective way to redirect wind and airflow. In doing so, it enhances comfort and it provides added protection. As a result, it could help to make a riding experience more enjoyable. The invention features a lightweight design that is convenient and easy to use so it is ideal for motorcyclists, boaters and operators of ATVs, snowmobiles, wave runners and vehicles. It also allows for the user of a shorter windshield. Additionally, the T&H EXTENDER AIR DEFLECTOR is producible in design variations.

The inventor described the invention design. “My design helps to keep the wind out of your face while riding and deflects it over.”

The original design was submitted to the Indianapolis office of InventHelp. It is currently available for licensing or sale to manufacturers or marketers. For more information, write Dept. 16-IPL-424, InventHelp, 217 Ninth Street, Pittsburgh, PA 15222, or call (412) 288-1300 ext. 1368.
