([PRWEB](#)) May 19, 2005 -- The fourth-generation 7 Series is the most successful prestige luxury performance sedan in BMW's history. It is a highly prestigious luxury sedan offering generous space and comfort for the driver and passengers. All BMW 7 Series now feature BMW's two-stage Adaptive Brakelights: Whenever the driver applies the brakes harder than usual, the larger brake light area warns motorists following behind. The optional CD changer is now MP3 CD-capable. The standard BMW Assist telematics service includes Bluetooth hands-free phone capability.

Virtually everything in the cabin is controlled through a single mouse-like interface called iDrive. BMW's controversial system controls the heater, the radio, the navigation system. Amazing technology sets the BMW 7 series apart from its competitors. Silent, hidden fans and heating elements cool or warm your rear end or your soft drink; microchips can detect a skidding tire or apply the brakes full force just in case you were distracted by a phone call; power sunshades keep the sun off your rear passengers as adaptive headlights turn with the car.

BMW's iDrive interface system is standard on all 7 Series models, and can operate virtually everything in the car, from stereo to climate controls to telephone to navigation, with a single mouse-like control. Standard safety features include dual frontal airbags, driver and front-passenger side-impact airbags, and BMW's Head Protection System, which amounts to a full-length, tube-shaped curtain on both sides of the cabin for front and rear head protection in a side impact. Also standard is BMW's Active Knee Protection, unique inflatable airbags that protect front passengers' knees. Its Anti-lock brakes, traction control and electronic stability control help drivers maintain control and avoid accidents

The BMW 7 Series offers that Sheer Driving Pleasure so typical of BMW. Being the e most successful 7 Series ever, Partstrain offers a variety of BMW Performance products and Replacement parts to suit the most demanding needs of its customers worldwide.
