

2005 Mitsubishi Outlander Reinforced Safety with Matched Performance Parts and Accessories

Mitsubishi's 2.4-liter four-cylinder engine is rated at 160 horsepower, matching the output of the Honda CR-V and Toyota RAV4. The 2005 Mitsubishi Outlander is available in three models: LS, XLS, and Limited. The new Limited and Limited AWD have heated leather seats, front side airbags, heated outside mirrors, and body-colored fender flares and air dams.

([PRWEB](#)) June 22, 2005 -- The Outlander is built on a rigid unibody chassis and benefits from Mitsubishi's extensive experience in international rallies and raids. The Outlander benefits from such body-strengthening techniques as MASH seam welding and what Mitsubishi calls its RISE design (Reinforced Impact Safety Evolution). Much of this technology was developed from the company's winning efforts in the Paris-Dakar raid as well as its involvement in the World Rally Championship with the Lance

It has four doors and a roomy cargo area that's easily accessible. Like other small crossover sport utilities, the Mitsubishi Outlander offers elevated seating for better visibility.

Mitsubishi's 2.4-liter four-cylinder engine is rated at 160 horsepower, matching the output of the Honda CR-V and Toyota RAV4. Mitsubishi tuned the Outlander's engine to deliver the bulk of its torque at lower engine speeds. Mitsubishi's MIVEC electronic variable-valve setup helps the engine to operate at peak power and efficiency throughout the rev range.

The 2005 Mitsubishi Outlander is available in three models: LS, XLS, and Limited. All come with the 160-horsepower 2.4-liter four-cylinder engine. Most models come standard with an automatic, but the base models come with a five-speed manual. Each is available with front-wheel drive (2WD) or all-wheel drive (AWD).

The LS trim includes air conditioning; cruise control; power windows and locks; power folding rearview mirrors; a height-adjustable steering wheel; height-adjustable driver's seat; a 140-watt, four-speaker AM/FM/CD audio system. It also has an analog clock; center console with storage; two 12-volt accessory outlets; 60/40 split, folding and reclining back seat; intermittent windshield and rear window wipers, and 16-inch steel wheels. A cargo cover, floor mats, keyless entry, and roof rails come standard on the AWD model and are optional on the 2WD model

XLS trim adds a rear spoiler, premium cloth seat fabric, extra speakers, whiteface gauges and clock, a leather steering wheel and shift knob, see-through headrests, a tubular roof rack and alloy wheels. Options for XLS 2WD include a Sun & Sound package with a 210-watt Infinity audio system with six-CD changer and sunroof.

The new Limited and Limited AWD have heated leather seats, front side airbags, heated outside mirrors, and body-colored fender flares and air dams.

Safety equipment includes three-point seatbelts for all five seating positions. Both front seats feature seatbelt pretensioner and force-limiter technology, which can help reduce injuries in an accident. Also standard are: child safety seat anchors. Anti-lock brakes are optional on the XLS and Limited models; ABS helps the driver maintain control of the car in an emergency braking situation.

Parts and accessories for Mitsubishi are available at Parts Train. All you have to do is go to

<http://www.partstrain.com/ShopByVehicle/MITSUBISHI> and choose which ones are compatible for your needs. The advantage of using Mitsubishi parts and accessories is that these are especially designed to work well with all Mitsubishi cars and therefore you have ensured performance and maximized workability out of these parts and accessories.

Partstrain also offers car parts, which are continuously being improved upon to ensure quality service and performance.
