Recall Number and Description: Safety Recall 12S37 – Speed Control Engine Cover Modification

What is the Issue? On your vehicle, there may be inadequate clearance between the engine cover and the speed control (sometimes known as cruise control) cable, which **could allow the engine to be stuck at full power** when the accelerator pedal is fully or almost-fully depressed. A throttle that is stuck fully or almost fully open may result in very high vehicle speeds and make it difficult to stop or slow the vehicle, which could cause a crash, serious injury, or death. **This risk exists regardless of whether or not speed control is used.**

What are we asking you to do? Please contact your dealer to schedule an appointment to have this important service procedure completed. If you do not already have a servicing dealer, you can access www.Fordowner.com for dealer addresses, maps, and driving instructions.

The vehicle owner is responsible for having this service action performed. Ford Motor Company reserves the right to deny coverage for any vehicle damage that may result from failure to have this recall performed on a timely basis. Therefore, please have this recall performed as soon as possible.
