Honorable Edmund G. Brown, Jr.
Governor of California
State Capitol
Sacramento, CA 95814

Dear Governor Brown:

This Annual Report of Fatal and Injury Motor Vehicle Traffic Accidents has been prepared by this Department in accordance with Section 2408 of the California Vehicle Code.

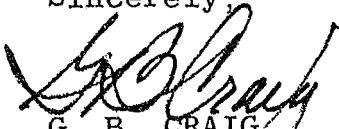

During 1977, California's fatal accidents increased 11.6% while injury accidents increased 9.5%. Vehicle miles of travel were the highest ever recorded for the State, 153.6 billion, an increase of 8.0% from 1976.

California's mileage death rate remained at 3.2 for the fourth consecutive year, the lowest recorded in the State's traffic accident history and below the 3.3 national death rate.

Of special interest in this year's report are Sections 6 and 7. Section 6 presents fatal and injury bicycle-involved motor vehicle accident data for the last five-year period. Section 7 presents various "short subjects" such as moped-involved accidents, accidents involving alcohol, and truck accidents on unincorporated roadways.

This publication is made possible only through the continuing contribution of city, county, and Statewide agencies. Their cooperation is greatly appreciated.

Sincerely,

G. B. CRAIG
Commissioner

Preface

This report of fatal and injury motor vehicle traffic accidents is compiled from motor vehicle traffic accident reports received from local police jurisdictions and from California Highway Patrol Field offices. It is assumed that all fatal and injury accidents which occurred in California in 1977 were reported and, therefore, are presented in this report. Property Damage Only (*PDO*) accidents are included in Section 2. However, the degree of completeness is in question since not all agencies report all their *PDO* accidents. *PDO* accident statistics should be used as indicators of the volume of accident occurrences rather than exact statistics.

Section 6, a presentation of bicycle accidents, is one of the special additions to this year's annual report. It appears from this five-year accident study, that bicycle accidents have decreased while other fatal and injury motor vehicle traffic accidents have increased.

Section 7, a presentation of accident data on a variety of subjects, is the second special section in this year's report. The section presents 1977 accidents involving mopeds, accidents by primary collision factors, alcohol involvement in accidents, accidents involving selected age groups (*parties aged 65 and over and parties aged 13-19*), and truck accidents on unincorporated roadways.

Copies of this report may be obtained from the Staff Services Section of the California Highway Patrol, P.O. Box 898, Sacramento, California, 95804, by the payment of \$2.50, which includes sales tax.

Section 1

TEN YEAR SUMMARIES 1968-1977

In 1977, California experienced almost a 10% increase in fatal and injury accidents. Despite this increase, the mileage death rate remained at its lowest, 3.2, for the fourth consecutive year and the mileage injury rate increased only slightly.

LOCATION

Of the 197,713 fatal and injury accidents that occurred in California in 1977, over 73% occurred on city roadways. Thirty-eight percent of these were at intersections.

VICTIMS

Approximately 40% of all persons killed and injured in motor vehicle traffic accidents in 1977 were between the ages of 15 and 24. This age group is consistently high for all victim classifications.

BICYCLE ACCIDENTS

This section reviews bicycle versus motor vehicle accidents from 1973 through 1977. The trend for this five-year period shows that fatal and injury bicycle accidents have decreased since 1974 and leveled off below 10,000 per year.

Section 7

SHORT SUBJECTS

This section presents a variety of traffic accident topics. Included are: moped involved accidents; fatal and injury accidents by their primary collision factor; alcohol involvement in accidents; the accident involvement of two age groups, 65 and older and 13-19 year olds; and truck accidents on unincorporated roadways.

MOPEDS

Nineteen seventy-seven was the first year moped involved fatal and injury accident information was retrievable from California traffic accident reports. Any involvement prior to this year was included in motorcycle data. It should be noted that a moped is subject to all the rules of the road applicable to a motor vehicle.

PRIMARY COLLISION FACTOR

The primary collision factor is a grouping of similar traffic accident causations as determined by the reporting Officer. The main use of this factor is in the areas of traffic law enforcement, traffic engineering and driver education.

ALCOHOL INVOLVEMENT

There are three degrees of alcohol impairment that describe the sobriety of parties involved in accidents: Had Been Drinking (*HBD*)—under the influence, characterized by a blood alcohol level of .10% or greater; HBD—not under influence; and HBD—impairment unknown.
